

The CageX[®] Ladder Cage Extension Net System: Safety and Security for Elevated Platforms and Workstations.

The Incord CageX[®] Net provides a measure of safety to workers on elevated platforms. It meets OSHA regulations for fall hazards and protects workers from falling.

Nothing could be easier.

The Incord CageX[®] Ladder Safety Net is designed to provide protection in the exposed area in the transition between the end of the cage and the top of the platform rail. CageX[®] protects these areas and prevents falls off the platform.

Everything you need in one bag. The CageX[®] Ladder Safety Net comes packed in a handy kit with 6 high strength polyester chinch straps to attach the net to the cage and to the lower hand-rail. CageX[®] kits are sold separately or in master cartons of a dozen nets.

CageX[®] is made of the modern fiber HTPP (high-tenacity polypropylene) which is UV resistant and is ISO 9001 certified. Each net is bordered with polyester rope and thread to assure the most weather and chemical resistant net assembly available. The attachment straps are made of polyester webbing. Each kit comes with easy to read instructions and can be installed in minutes with no tools necessary.

With Incord you get:

- A simple, effective, and economical way to protect platform workers from danger.
- Rugged, reliable netting and heavy duty ty-wrap construction provide a durable, strong and easy to install safety alternative to steel slat ladder cage extensions.
- A Safety Net Kit — in sizes to fit most ladder cage extensions (custom sizes are available upon request).
- Each CageX[®] Ladder Cage Extension Safety Net Kit comes ready to install and requires virtually no maintenance.

Safety is good business.

Making sure your workers are safe isn't just a good idea, it's good business. Our CageX[®] Ladder Cage Extension Net System helps you:

- Comply with Federal OSHA and other state safety regulations.
- Adhere to loss prevention strategies insurance companies believe will lower your risk — including legal risk.
- Reduce downtime and improve productivity, since studies show people work better in a safe environment.
