

HATCH-GRIP

LADDER RUNG CONTINUATION GRIPS BEYOND THE HATCH OPENING

HATCH-GRIP provides ladder rung type grips on the exterior of a roof hatch to ensure a firm, stable grip when you exit and enter the roof hatch.

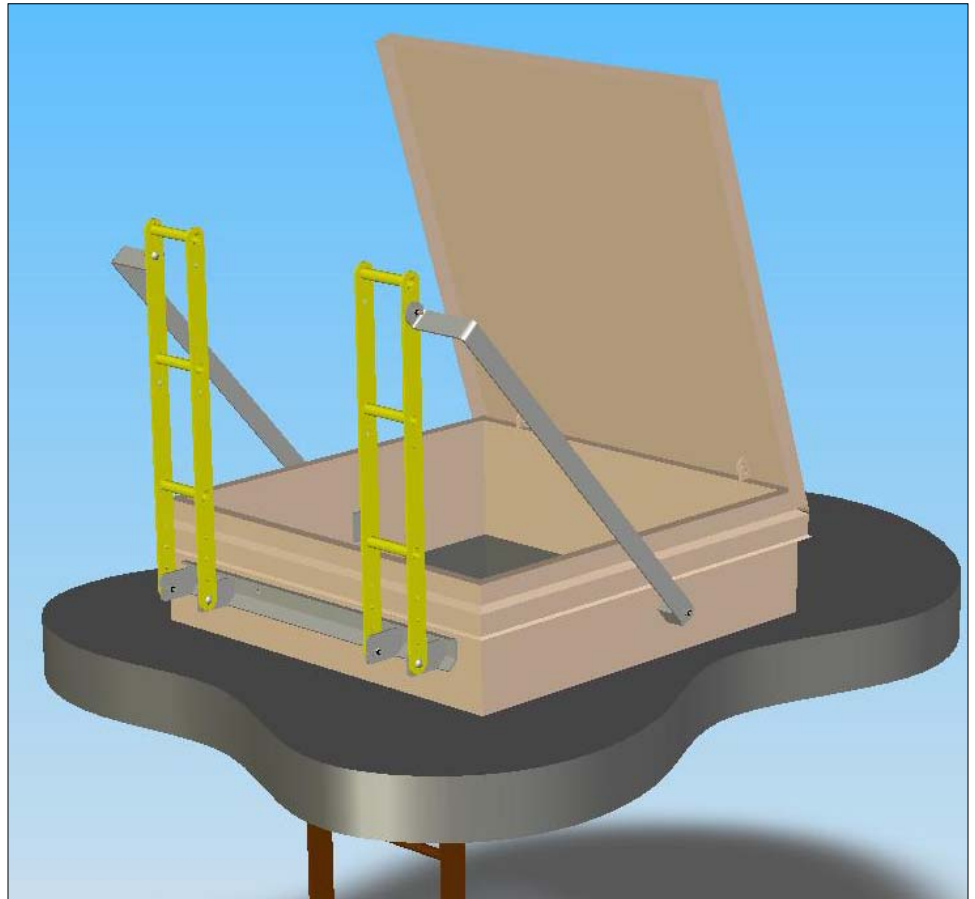

The loss of balance while stooping over the edge of the roof hatch while trying to continue to climb the ladder places a person in an unbalanced position, the possibility of falling backwards is real, relevant, and could result in injury or fatality.

Simply mount HATCH-GRIP to your roof hatch curb and you have given anyone climbing the ladder an extension of the ladder rungs with which to comfortably exit or enter the roof hatch.

HATCH-GRIP SPECIFICS:

- Bolts to Roof Hatch Curb.
- Provides for variable height adjustment for proper and comfortable grip spacing from the last rung of the ladder.
- Hot-Dip Galvanized Finish for durability in exterior environments.
- Ships Knocked-Down for easy shipping, handling, and transporting to installation area.
- Fits all roof hatch sizes.
- Easily installed by anyone with only a few common tools.

U.S. Patent No. 6,095,283
U.S. Patent No. 6,347,685
U.S. Patent No. 6,619,428

Quick Facts:

- Large Grab Bar Surfaces for Stability
- Universal Stabilization Bracket
- Variable Height Adjustment for Proper Grip Spacing
- EPDM Gasketing at Attachment Points
- Backer Plates at Attachment Points for secure installation.
- Mounts to existing hatch curb.

Note: **HATCH-GRIP** is not intended to act as a protective barrier for guarding the open roof hatch. For complete fall protection guarding of an open roof hatch see our **HatchSAFE** product.
